PROCEDURE: Add phase A to a container and start stirring until dissolved. In a container, previously homogenize phase B. Gradually add phase B at room temperature with vigorous stirring. Heat to 85 °C and continue stirring for 20 minutes with vigorous stirring. Afterwards, add phase C little by little. Keep the temperature at 85°C and mix for another 10 minutes with vigorous stirring. Start cooling and put on moderate stirring. After 40°C add phases D, E and F respectively, with 5 min between each phase. Afterwards, mix for another 10 minutes with vigorous stirring. Adjust the pH with phase G.

FORMULA SPECIFICATION
- Viscosity: 10.000 - 13.000 (Brokifield RVT - Spindle 5/20 RPM)

ASSESSA's raw materials:

CARBOGREEN PLATFORM allows us to make natural and biodegradable hydrogels with a unique sensory profile. In this formula CARBOGREEN EI is used to form a cream with an ultra-creamy, shiny and light texture. After spreading, the skin is hydrated, soft and velvety.

PLUGIN GS is a combination of sunflower, chia and jojoba oil fractions with a biomimetic composition similar to skin sebum and is a natural substitute for Silicone D5 in skin care formulas, providing a silky touch.

ACTIMULSI GA20 is a natural multifunctional bioactive derived from the scar exudate of Acacia senegal, which improves the sensorial properties of formulas, providing a soft touch.

HYPSKIN BS represents a new generation of active skin care ingredients. It modulates 507 genes in human keratinocytes and fibroblasts, revealing intense activity in the dermis and epidermis. Among its benefits are:
- Increases cell renewal (matifying action);
- Reduces and whitens skin spots;
- Improves the evenness of the skin tone;
- Stimulates microcirculation – makes the skin more radiant;
- Stimulates the synthesis of the dermal matrix;
- Improves the structure, density and firmness of the skin;
- Reduces the amount, size and depth of wrinkles;
- Softens the microrelief of the skin;
- Improves skin texture.
